📍 Christchurch, New Zealand

Professional Experience

Principal Engineer & DevOps, *Witchkult*

2024 - 2026

- Overseeing all technical aspects, including systems architecture, gameplay, and DevOps.
- Implemented and designed editor tools for new gameplay technology.
- Custom HLSL shaders for specific visual style.
- Manage custom Unreal Engine source modifications.
- Created custom gameplay event system giving designers complete control over objects in the world with very minimal blueprint setup.
- Extended Unreal Game Sync (UGS) to improve artist workflow by adding profiles that can be managed by engineers.

Engineer, *Narrative Tools Ltd*

2025

- Custom editor tooling such as, editor save slot selection for quick PIE.
- Fix bugs in existing tooling and systems.
- Wrote a single click setup project to setup the required project settings for a Narrative Pro based project.
- Added runtime debugging support to dialogue and quest systems.
- Designed and developed a reactive music system, and produced a YouTube tutorial on how to use it.

Principal Engineer & DevOps, *Magnetite Games LLC*

2024 - 2025

- Overseeing all technical aspects, including systems architecture, gameplay, and DevOps.
- Design and implemented editor tools for Designers and Artists.
- Managed internal and play test builds.
- Optimized existing game systems and visual effects.
- Extended Paper2D plugin provided with Unreal Engine 5 to meet technical and design requirements.
- Designed and implemented a Utility AI system for the enemy CPU character.
- Manage Unreal Engine source code changes and upgrades.

Gameplay Programmer, *Digital Confectioners*

2022

- Fix bugs for a client's live service multiplayer game.
- Convert existing game objects for use with a new interlinking project, allowing players to implement their games/game modes using existing game objects.
- Implement gameplay systems from design documents for prototyping using Unreal Engine 5.

Principal Engineer, *Cresthelm Studios AB*

2020 - 2023

- Sole programmer overseeing all technical aspects, including systems architecture, gameplay, and a small amount of DevOps.
- Implemented and designed editor tools to aid artists.
- Managed internal, QA, and release builds.
- Optimized existing game systems, materials and particle effects.
- Rewrote entire project in 7 months.
- Designed and implemented a custom State Machine for enemy AI.
- Improved and extended Paper2D plugin provided with Unreal Engine 5 to meet technical and design requirements.
- Manage Unreal Engine source code changes and upgrades.

Primary Skills

C++

Odin

Unreal Engine

Git

Perforce

Steamworks

EOS

GOG

FMOD

Unity

Projects

Dino3, *Game engine*

C++ - SDL3 - DirectX11

A hobby game engine / framework that i started after trying out the Odin programming language. Dino3 is not aimed at being a general engine, but more specific to tooling, technical design, and rendering.

Dismember, *Runtime dismemberment plugin*

Unreal Engine 5

Dismember handles authoring bone groups for limb damage, limb damage, managing VFX, and limb physics. I created a custom editor and asset type making it easy to add, change, and reuse settings.

Dumb robot, *Prototype*

Unreal Engine 5

A cleaning-like simulator where you manage robot vacuums. With Dumb Robot, the goal was to explore Debug Visualizers and runtime Render Targets in Unreal Engine 5 in more detail along with the asset manager.

Diluvian Ultra, *Retro FPS*

Unreal Engine 4

A single-player, first-person shooter focusing on a retro aesthetic and fast-paced, strategic combat. The game is set in its own expansive fictive universe. Rather than gritty or dark, Diluvian Ultra is colorful and fantastical, like the cover of pulp sci-fi novels of the past.

Iris, *Prototype*

Unity 5

A single-player, first-person, lowpoly survival game. Initially build to explore how to approach systems design in a more open style game, while learning the Unity game engine.
